

RANKFORGE AI

Rank Evidence. Not Resumes.

Evidence-Based Talent Intelligence for Intelligent Candidate Discovery

Traditional ATS ranks claims. RankForge ranks proof.

A working PoC that transforms job descriptions, resumes, projects, career metadata, and activity signals into an explainable, bias-aware, expertly ranked shortlist.

Evidence-Aware Shortlist

Proof-of-Success Engine

THE HIRING FAILURE WE ARE SOLVING

Why keyword-first ATS produces misleading shortlists

Resume Inflation

Candidates optimize resumes with keywords but may lack real execution proof.

Hidden Gems Missed

Adjacent experience, projects, and trajectory are ignored when exact keywords are absent.

Black-Box Ranking

Recruiters cannot explain why one candidate is ranked above another.

Weak Signal Integration

Projects, career movement, activity, proof quality, and risk are not evaluated together.

The core insight: resumes are claims. Hiring quality improves when the system ranks evidence of role success.

ONE POWERFUL PRODUCT IDEA

Every module reinforces one memory hook

RANK EVIDENCE. NOT RESUMES.

RankForge does not ask: "Who has the keyword?"

It asks: "Who has the strongest proof of succeeding in this role?"

SOLUTION ARCHITECTURE

Simple enough to demo, rigorous enough to defend

Working PoC Components

ROLE SUCCESS BLUEPRINT

Deep job understanding: Senior GRC Analyst example

Core Capabilities

- End-to-end SOC 2 / ISO 27001 audit management
- Vendor risk lifecycle ownership
- BFSI contextual control testing
- Stakeholder-facing audit reporting

Required Proof

- Audit cycle personally led
- Redacted report or risk summary
- Vendor risk case with outcome
- Client-facing security assurance example

Hidden Requirements

- Autonomy and ownership
- Commercial mindset
- Diplomatic tenacity
- Comfort with ambiguity

Wrong-Hire Risk

- Failed audit or lost certification
- BFSI client trust impact
- Unmanaged vendor risk
- GRC credibility damage

The system converts a complex JD into a success contract: capability + proof + context + failure risk.

PROOF-OF-SUCCESS ENGINE

Transparent scoring instead of black-box ranking

Score = 25% Claim Match + 30% Evidence Strength + 20% Context Fit + 15% Career Trajectory + 10% Activity Signal - Normalized Risk Gap

Top 3 Candidate Score Breakdown

Candidate	Claim	Evidence	Context	Risk Adj.	Final
Sarah Jenkins	96	98	95	-10	95%
Michael OConnor	94	92	95	-15	91%
David Chen	72	96	92	-12	88%

David Chen proves the core logic: lower claim match, stronger evidence, promoted as a Hidden Gem.

WHY RANKFORGE REORDERED THE SHORTLIST

The aha moment judges should remember

Candidate	ATS Rank	RankForge	What ATS Saw	What RankForge Found
Aisha Patel	#1	#6	Strong keyword match	Weak evidence, high risk gap
David Chen	#9	#3	Lower keyword match	Strong vendor risk evidence and SOC 2 evidence workflow
Sarah Jenkins	#2	#1	Strong keyword match	Strong evidence and direct BFSI experience
Marcus Thorne	#3	#7	Senior GRC keywords	Weak recent proof, inflated profile risk

Aisha looked best to ATS

Keyword-perfect, but evidence-poor.

David looked average to ATS

Lower keyword density, but strong proof.

Traditional ATS ranks claims. RankForge ranks proof.

RANKED CANDIDATE OUTPUT

Submission-ready Top 10 ranked shortlist

Rank	Candidate	Type	Proof	Risk	Key Evidence
#1	Sarah Jenkins	Strong Evidence	95%	10%	SOC 2, ISO 27001 and BFSI GRC execution
#2	Michael OConnor	Strong Evidence	91%	15%	Vendor risk at Top 10 bank
#3	David Chen	Hidden Gem	88%	12%	Strong adjacent proof and SOC 2 evidence workflow
#4	Jamie Lin	Hidden Gem	85%	15%	High trajectory with solid base skills
#5	James Kim	Standard	82%	25%	Traditional audit depth, cloud gap
#6	Aisha Patel	Resume Inflated	55%	75%	Keyword match but weak evidence
#7	Marcus Thorne	Resume Inflated	50%	80%	High-level claims, weak execution proof
#8	Elena Rodriguez	Standard	48%	82%	Weak recent execution
#9	Chen Wei	Standard	45%	70%	Overqualified, poor long-term fit
#10	Chloe Brooks	Resume Inflated	40%	90%	Keyword stuffing, no verifiable projects

EVIDENCE VERIFICATION DEEP DIVE

Every rank comes with proof and validation questions

STRONG EVIDENCE

#1 Sarah Jenkins

Exceptional proof across SOC 2, ISO 27001 and BFSI GRC execution.

Validation question:

Walk through the most challenging SOC 2 Type II audit you led.

HIDDEN GEM

#3 David Chen

Lower keyword density, but strong vendor risk evidence and SOC 2 workflow improvement.

Validation question:

Describe the before-and-after impact of your SOC 2 evidence workflow.

RESUME INFLATED

#6 Aisha Patel

Perfect keyword overlap, but severe lack of verifiable execution evidence.

Validation question:

What evidence did you personally collect and validate in the audit?

RESPONSIBLE AI AND GOVERNANCE

Designed for decision support, not automated hiring decisions

Fairness Firewall

- Human reviewer remains final decision maker
- Protected attributes excluded from scoring
- Score factors are job-relevant and explainable
- Audit trail records analysis, exports and weight changes
- Risk scores drive validation, not automatic rejection

Audit Trail Snapshot

Date Generated	5/29/2026
Dataset	Synthetic mock data
Protected Attributes Used	No
Scoring Model	Proof-of-Success v1.0
Human Review Required	Yes

WHY THIS SHOULD WIN

One product idea, fully proven through the PoC

RANKFORGE AI DOES NOT RANK RESUMES. IT RANKS EVIDENCE OF ROLE SUCCESS.

Deep Job Understanding

Role Success Blueprint extracts real success conditions.

Contextual Relevance

Semantic fit finds proof beyond exact keywords.

Signal Integration

Skills, projects, history, evidence and risk work together.

Explainable Output

Every rank has evidence, risk gap and validation question.

Final pitch: Traditional ATS ranks claims. RankForge ranks proof.
